KEY SKILLS

- **R Studio** (Main Skill): Advanced expertise in data analysis, statistical computing, and modelling.
- **Shiny App:** Advanced user with the ability to create a diverse type of dashboard for report purpose.
- **Python**: Possesses a foundational understanding of Python.
- **Excel**: Proficient in Excel, routinely utilized in conjunction with R Studio.
- **EViews**: Basic familiarity with EViews, capable of generating simple graphs and extracting key statistical data from datasets.
- **SQL**: Can utilise to source, cleanse, and reconcile data for weekly reporting, supporting a consolidated dataset/database for planning insights.
- **Qlik**: Confident navigating Qlik to pull weekly performance and operational data, verify data quality, and integrate outputs into an R-built reporting database.
- **Research & Team Collaboration**: Strong project management across multiple workstreams; effective contributor in diverse teams (Monash University + industry placement).

EDUCATION

Master of Business Analytics at Monash University
Bachelor of Economics | Major in Business Analysis at Monash University

EXPERIENCE

Financial Data Analyst Intern - Commercial Finance Team

March 2026 - Present

- Developing a structured reporting database for the Commercial Finance team under manager guidance.
- Consolidating and transforming financial data to a better format to improve data accessibility and reporting consistency.
- Designing automation tools to streamline reporting workflows and reduce manual workload across the team.

Data Analyst Intern - S&OP Team

Nov 2025 - February 2026

- Managed multiple projects concurrently to support S&OP reporting and analysis.
- Extracted and prepared operational data using SQL, Qlik, and Pronto.
- Consolidated data sources and built a structured reporting database using R, improving consistency and reusability for weekly reporting.

AIESEC - Business Development Officer

Nov 2024 - Nov 2025

- Identified and pursued partnership opportunities to expand AIESEC's network and visibility.
- Negotiated agreements with corporate partners, securing sponsorships to support organisational goals.

PROJECT

Finance Data Integration & Database Development

JBS Australia Pork (Rivalea), Commercial Finance Team, under Diogo | Mar 2026 – Present

- **Description**: Developing a centralised finance database using R to consolidate financial and operational data from multiple internal sources into a structured dataset for reporting and analysis.
- **Objective**: Improve data accessibility and consistency by standardising data structures and reducing manual data preparation for finance reporting and analysis.

Shipment Suggestion & Batch Consolidation Tool

JBS Australia Pork (Rivalea), Logistic Team, under Bhavika | Jan 2025 - Present

- **Description**: Developed an R-based shipment batching algorithm that consolidates order lines into optimal shipment groups based on product, client, and establishment constraints.
- **Objective**: Automate shipment grouping logic previously done manually, ensuring consistent batch creation while respecting operational constraints such as Client, Establishment, and Product separation rules.
- **Results**: Reduced manual shipment planning effort, improved pallet space utilisation, and provided a repeatable and scalable shipment suggestion process for planners.

Database Automation & Reporting Pipeline

JBS Australia Pork (Rivalea), S&OP Team, under Luiz Wegner | Completed: Dec 2025

- **Description**: Built an automated data pipeline to extract and consolidate operational data from SQL, Qlik, Pronto, and email-based inputs into a single, report-ready database using R.
- **Objective**: Reduce manual processing time and improve reliability of weekly S&OP reporting datasets.
- **Results**: Reduced end-to-end refresh time from ~2 hours (manual process) to ~10 seconds through automation and standardised transformations, enabling faster reporting turnaround and improved data consistency.

Shiny Interactive Dashboard

JBS Australia Pork (Rivalea), S&OP Team, under Eduardo Ribeiro | Completed: Dec 2025

- **Description**: Developed an end-to-end Shiny application that ingests Excel inputs and transforms them into a calculated yield database. Implemented an allocation editor (week/location/primal) with validation logic and interactive stacked-bar visualisations showing kg composition by cut option and allocation labels. Added hover tooltips to surface different type of information at segment level.
- **Objective**: Allow the user to input the data from their local data and edit the data using the interactive dashboard until they are satisfied with the result and download the result to the local file.
- **Results**: Reduced scenario-testing time from manual spreadsheet edits to near real-time "what-if" analysis, improved transparency of assumptions via drill-down tooltips, and enabled faster weekly planning discussions by making allocation impacts visible across 52 weeks and multiple sites. Moreover, the dashboard could be post online allowing non-coding user to work with analysis results.

Blackjack simulation for R

Monash University, under Prof. Rob Hyndman | Completed: April 2025

- **Description**: Worked in group to create a modular Blackjack game package in R, supporting three key modes: Single-player, Multiplayer with unlimited players, and Simulation mode with customizable draw thresholds
- **Link**: https://github.com/MonashARP/game-package-bilbies.git
